MINH-TAM DAVIS 1642 -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE $\underline{1}$ MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1 136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- if the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely Failure to reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this considered timely specified above.

- Any re earner	e to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133) deply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any

DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 54-78, drawn to a recombinant polynucleotide or an expression cassette comprising at least one regulatory element derived from intron 3 of the PSM gene, a promoter and a sequence encoding a heterologous polypeptide, classified in class 435, subclass 320.1.
- II. Claims 79-84, drawn to a nucleic acid molecule having enhancer activity, a vector comprising said nucleic acid molecule, classified in class 536, subclass 23.1.
- III. Claims 85-94, drawn to a method for directing expression of a coding sequence in a cell, classified in class 514, subclass 44.
- IV. Claims 95-106, drawn to a method for treating prostate cancer, classified in class 514, subclass 44.
- V. Claims 95-106, drawn to a method for treating bladder cancer, classified in class 514, subclass 44.
- VI. Claims 95-106, drawn to a method for treating breast cancer, classified in class 514, subclass 44.

In addition, upon election of any of groups I-VI, further election of the following patentably distinct species is required:

Any one of the enhancers comprising nucleotides 14,045 to 15,804, nucleotides 14,760-15,804, nucleotides 14,760 to 16,575, nucleotides 14,045 to 16,575 of the PSM gene, or any combination of the above enhancers.

Application/Control Number: 09/914,651

Art Unit: 1642

Upon election of any of groups I, III-VI, further election of the following patentably distinct species is required:

Any one of the promoters cited in claims 57, 74, 90, or 100.

The inventions are distinct, each from each other because of the following reasons:

Inventions (I-II) and (III-VI) are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (M.P.E.P. 806.05 (h). In this instant case, a vector could be used for expression a protein, for testing a drug and for treating diseases; a DNA sequence could be used for the detection of similar DNA or RNA sequences, for making an expression vector, and for producing its encoded protein.

The products of groups I-II are patentably distinct, because they are drawn to entirely different biochemicals, having different structures.

The methods of groups III-VI are distinct from each other because they differ at least in objectives, method steps, reagents and/or dosages, and/or schedules used, response variables and criteria for success.

The species enhancers are distinct because they are structurally distinct.

The species promoters are distinct because they are structurally distinct.

Because these inventions are distinct for the reason given above and have acquired a separate status in the art, and further, because the searches for the groups are not coextensive, and therefore, it would be a serious burden for the Examiner to examine all

Application/Control Number: 09/914,651

Art Unit: 1642

the groups and species together, restriction for examination purposes as indicated is proper.

Applicants are required under 35 USC 121 to elect a single disclosed group for prosecution on the merits to which the claims shall be restricted. Applicant is further advised that if Applicant elects a group having species requirement, a response to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 USC 103 of the other invention.

Applicants are reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 C.F.R. 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one

Application/Control Number: 09/914,651 Page 5
Art Unit: 1642

claim remaining in the application. Any amendement of inventorship must be accompanied by a diligently-filed petition under 37 C.F.R. 1.48(b) and by the fee required under 37 C.F.R. 1.17(h).

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MINH-TAM DAVIS whose telephone number is 703-305-2008. The examiner can normally be reached on 9:30AM-4:00PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, ANTHONY CAPUTA can be reached on 703-308-3995. The fax phone numbers for the organization where this application or proceeding is assigned are 703-872-9306 for regular communications and 703-872-9307 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0916.
